

Kylie's put on a really fresh face

Not only has singer Kylie Minogue, 39, gotten healthy— it looks like she's found the fountain of youth! "Her arched brow and wrinkle-free forehead are indicative of Botox injections," says Dr. Anthony Youn, the editor of Celebritycosmeticsurgery.blog.spot.com. "Plus, her skin is flawless — the likely result of either chemical peels or laser treatments." NYC plastic surgeon Dr. Elie Levine agrees: "Kudos to Kylie for looking so radiant. She not only beat breast cancer, she did it looking beautiful."

Kim's nose looks more refined

Party girl Kimberly Stewart, 28, may not live on the straight and narrow, but it appears her look is on that course. "Her nose is certainly looking more Paris Hilton," says NYC plastic surgeon Dr. Paul Lorenc, who suspects Kim has had rhinoplasty. "It's more refined, and the nostrils seem higher." A filler like Restylane may have filled the hollows beneath Kim's eyes and collagen may have given the celeb's lips their fuller appearance, says Dr. Levine, who adds, "These changes and a mature haircut make her more beautiful." Kim's rep denies that she had work done.
